DESIGN REVIEW.

A pitch-side audit of the tournament app — what's pulling its weight, what's drifting from the brief, and the half-dozen edits that would tighten it the most before the Summer Party.

WORKING WELL 12 Solid patterns to keep	NEEDS WORK 6 Issues called out below	QUICK WINS 4 < 1 hr to ship each	BIGGER CALLS 2 Worth a conversation
---	---	--	--

SIX THINGS TO FIX.

Ranked by impact on the people actually using the app — a parent in the sun and a tired organiser entering a score with one hand.

01

BRAND

BRAND COLOURS DRIFTED

The app uses old palette values. PRD-stated HPFC hexes never landed in `globals.css`.

02

READABILITY

BRIEF SAYS DARK, DESIGN SHIPS LIGHT

PRD calls for a high-contrast dark theme for sunlight. Only the headers are dark — bodies are off-white.

03

SPEED

SCORE ENTRY ISN'T SUB-10S

The timer eats the fold. Score steppers sit below it, requiring a scroll on most phones before the first tap.

04

HIERARCHY

LIVE MATCHES LOOK QUIET

Completed matches are dark and loud. Live matches are pale. The visual weight is backwards.

05

INFORMATION

LEAGUE TABLE IS TOO THIN

W/D/L is missing, GF/GA collapsed into GD, and the qualifying line is a 1.5px ribbon you have to hunt for.

06

SPECTATOR

"WHAT'S ON NOW?" IS BURIED

Parents arriving mid-event want pitch + score + minute. It's two taps and one scroll deep.

DON'T BREAK THESE!

WHAT'S WORKING.

VOICE

Bebas + Inter + the Permanent Marker accent reads as *"club, not corporate"*. Don't sand this off.

SHADOWS

4-px hard offsets give the noticeboard feel. Active-state translate animations make taps feel physical.

FLOW

15 screens cover the lifecycle without bloat. Setup → group → knockout → champion reads like a clear story.

SCOPE

No player names, no accounts, no notifications. The product is exactly as big as it needs to be.

01 BRAND

TWO PALETTES, ONE APP.

The PRD lists four HPFC hexes. The codebase has six other ones. Neither set is "wrong" — but they aren't the same set, and the difference is visible side by side.

Pick the canonical four, document them, then prune the spares. Smaller palette = sharper brand and one less guessing game when adding a new screen.

chalk
extra

pitch
extra

line
extra

None of the four brand hexes match. The reds drift by 8° of hue, the blue is 40% darker than spec, the gold is 5 points off in lightness. The extras (chalk, pitch, line) earn their keep — keep those, but reconcile the brand four.

FIX Replace the five branded variables in `app/globals.css` with the PRD hexes, keep `chalk / pitch / line` as supporting tokens, and add a short comment in the Tailwind config naming each colour's role.

02

READABILITY

BRIEF SAYS DARK. DESIGN SHIPS LIGHT.

The PRD specifically calls for a "high-contrast dark theme with HPFC brand colours for visibility in bright sunlight." Today only the four-line header strip is dark — every screen body is chalk-white. In direct sun that's a near-mirror.

Chalk body washes out under bright sun. The dark header proves the point — it stays legible.

THE PATTERN

Every header is bg-ink with white text — confidently dark. Then the body switches to bg-chalk with ink text on white tiles. On a sunny Saturday in Oxford, the body is the part you can't read.

BODY TYPE SIZES TODAY

10 px Pitch labels, status counts

12 px League table cells, "how it works"

14 px Match titles, body copy

10–12 px at arm's length, with sweat on the screen, is the wrong end of the stick.

FIX

Flip the default. Body = ink, surfaces = ink-light (#1A1A1F), text = chalk. Minimum body 14 px; table cells 16 px; primary numbers (scores, points) stay at display sizes. Reserve the chalk/white treatment for the public results-poster and PDF exports.

Dark surfaces hold under glare. Gold + red brand colours pop instead of competing with white.

03 SPEED

SCORE ENTRY MISSES THE 10-SECOND BAR.

From *tap "Enter Score"* the organiser sees: timer header, time display, length stepper, five preset chips, Start button — then a single team's score control. The away team requires a scroll.

The brief sets a hard target: under 10 seconds to enter a result, pitch-side. The current screen puts a full Match Timer (with a number stepper, five preset chips, and Start/Pause/End buttons) above the two score steppers. On a 390×844 device the away team's + button is below the fold.

The Match Timer is useful, but it's a separate job from "type in the final score". Treat them as two modes. Default to score-only; let an organiser open the timer when they want one.

Both teams visible on one tap. CTA shows the final score so the organiser confirms what they saw. Timer moves to a sibling tab — same screen, one tap away when needed.

-1

Scroll removed

Both score controls above the 844-px fold.

+30%

Tap target

Steppers grow from 56 → 72 px square.

2 TABS

Score / Timer

Timer kept, no longer compulsory chrome.

SAVE 2-1

CTA reads back

Cuts the "did I tap one too many" moment.

04

HIERARCHY

THE LOUDEST TILES ARE THE DEAD ONES.

In `MatchTile.tsx`, completed matches use *ink background, white type, no shadow*; live matches use *white background, red border*. Visually, the finished match shouts and the live one whispers.

On a fixtures list this means a parent's eye lands first on a result that's an hour old, rather than the game their kid is playing right now.

05

INFORMATION

THE TABLE IS DOING HALF ITS JOB.

Right now the table shows #, TEAM, P, GD, PTS. The data model already has W / D / L and could compute GF / GA — these are the columns parents and coaches actually argue over.

The qualifying indicator is also a 1.5-px green ribbon you have to know to look for. Make it part of the row's identity.

ADD

TOP 4 → SEMI-FINALS								GD BREAKS TIES

06 SPECTATOR

"WHAT'S ON, WHICH PITCH?"

A parent arriving at 11:45 has one question: *where do I go and what's the score?* Today they land on Home → tap a tournament → land on Overview → see a single "LIVE NOW" tile with no pitch and no minute.

The home screen should answer the question without a tap. Lead with a "Live on the pitches right now" strip; tournaments live below it.

TODAY'S HOME SCREEN TELLS YOU

- 1. Three tournaments exist
- 2. One is "LIVE", one is in "FINAL", one is "COMPLETE"
- 3. Each has a leader and a "next match" time

IT SHOULD ALSO TELL YOU, WITHOUT SCROLLING

- 1. What's kicking off in the next 10 minutes, on which pitch
- 2. What's playing right now, score and minute
- 3. Which result just came in

Three event cards. To know what's *actually* happening right now you must tap one and

One glance answers the question. Tournament navigation moves to a quiet list

scroll.

below the fold.

QUICK WINS WORTH A SWEEP.

Half a day's work, all together. Worth doing before kickoff.

A

COMPONENTS • BUTTON.TSX

STRIP THE DUPLICATE CLASS

The Button currently concatenates `bg-[#B11227]` twice over the variant. It overrides any other background you pass — Secondary, Ghost, and Icon all silently go red.

```
${baseStyles} ${variants[variant]} ... bg-[#B11227]} bg-[#B11227]
```

B

SCREEN11_QR

GENERATE A REAL QR

The decorative SVG looks like a QR but doesn't scan. Drop in a real QR encoder (`qr.js` / `qrcode-svg`) keyed to the actual tournament URL. Same poster aesthetic, just functional.

C

CROSS-SCREEN

SHOW PITCH NUMBER EVERYWHERE

MatchTile, fixtures list, admin "Next Match", QR poster — all already have a slot for pitch. Wire it in from the data model. It's the single most useful field for a parent on the day.

D

STATUS INDICATOR

OFFLINE STATE PER THE BRIEF

"Graceful degradation" is promised, never shown. Add a 1-line banner under the header: `⚠ Offline • last sync 11:42`. Cached data already exists; just surface the state.

E

BRACKET.TSX

COMPACT KNOCKOUT LADDER

Current bracket is a vertical list of stacked sections — readable but doesn't *look* like a bracket. Add 8-px L-shaped connectors between rounds so the eye traces winner→winner.

F

SCREEN6_ADMINLOGIN

5-DIGIT CODE → BIGGER INPUTS

Current cells are 56×64. With cold/wet hands, mis-taps land on the wrong square. Widen to 60×72 and pad gaps to 12 px. Add a "stuck? text the organiser" link — costs nothing, prevents a stand-around moment.

A TWO-WEEK PLAN.

WEEK 1 · BRAND & CONTRAST

RECONCILE AND DARKEN.

- 1. Replace four brand hexes in `globals.css`
- 2. Introduce dark surfaces (`#0B0B0B` body, `#17131D` card)
- 3. Audit body type — nothing below 14 px
- 4. Fix the duplicate `bg-[#B11227]` in `Button.tsx`

≈ 1.5 DEV-DAYS

WEEK 2 · SPEED & SPECTATOR

SCORE IN 10S. GLANCE IN 1.

- 1. Split `EnterResult` into `Score / Timer` tabs
- 2. Confirm-CTA reads `SAVE 2-1 ✓`
- 3. Home screen: "On the pitches now" strip above tournaments
- 4. Surface pitch number across `MatchTile / fixtures / admin`

≈ 2 DEV-DAYS

AFTER THE PARTY

POLISH AT LEISURE.

- 1. Real QR codes
- 2. League table `W/D/L` + form dots
- 3. Bracket connector lines
- 4. Offline banner
- 5. Winner screen photo slot

≈ 1 WEEK, CALMLY

THE GOOD NEWS

None of this is a re-skin. The aesthetic — Bebas, hard shadows, the chalk noticeboard feel — is exactly right for a grassroots tournament. The work above is mostly closing the gap between the brief and what's shipped. A long weekend, and the app will read as confidently in the sun as it does on a laptop.

ONWARDS!
